Description

The kit consists of a three stage, screw thread alloy cleaning rod, which can be used on everything from a pistol to a PCP rifle and everything in between, just simply add or remove unnecessary sections. The end section features a comfortable wood grip handle which helps with pushing, pulling and twisting the rod as required.

Also comes with bronze brush heads and soft wool mop heads for both .177 & .22 calibres, plus a multi-fit pellet remover head for unclogging your barrel should a mis-shapen pellet cause a jam.

For the best results with rifled barrels, twist the cleaning rod as you work your way down the barrel, let the head rotate with the rifling to help dislodge dirt and any debris. Simply pushing the rod down the barrel may miss any swarf in the rifling and could lead to rod bending under pressure as it may meet with some resistance as it pushes over the gaps formed by the rifling.

We recommend only using this product with a good quality gun oil or silicone oil, some other oils

can be either corrosive to the mop heads and cause damage to your your airgun.

This product maybe supplied with or without Remington UK labels on but is the same specification.
